BRIHANMUMBAI MUNICIPAL CORPORATION

(Hydraulic Engineer's Department)

**Sub: Fabricating and installing Canopy for ventilation shaft of Clarifier Gallery at Settling Plant
Mumbai-IIIA, Panjrapur**

TECHNICAL SPECIFICATION

Preamble:-

Under the Mumbai 3A Water Supply Project Panjrapur, a water treatment plant with a capacity of 455 MLD was set up in 2007 and it has six Settling tanks. The system required to drain the sludge extracted from the impure water during the water treatment process has been installed in the underground gallery in the center of the plant. Which involve 250 mm. Diameter pipes, valves with their control panels, control panels of flocculators which are installed on the top of the plant.

If there is a malfunction in the above machines or while the preventive maintenance work of the above equipments is going on, maintenance staff have to stay in the gallery for a long time. Since the length of the gallery is approximately 105 meters, the moisture content of the gallery is higher and the amount of oxygen in the gallery is low compared to the outer atmosphere. Therefore, a ventilation shaft has been installed at one end of the gallery to provide a healthy environment while working. Since the top end of the ventilation shaft is open in the atmosphere, a canopy has been installed to prevent rain water and other things from entering through it. The roof was erected in 2007 and is completely rusted by the surrounding environment (photos are attached at Pg. C- to C-). The canopy has been painted with corrosion resistant paint time to time. At present, the existing canopy has gone beyond repair and it is very important to install a new canopy for safety point of view.
