Under Mumbai-IIIA Water Supply Project, the Water Treatment Plant of capacity 455MLD is installed at Panjrapur. This plant is taken over by H. E. department w. e. f. 29.06.2009 and the maintenance activities carried out by H. E. department from 28.06.2010. The Chlorine plant M-IIIA is commissioned in the year 2013 by WSP department.

The various sections under Chlorination Plant Mumbai III-A include drum room having storing capacity of 76 nos. liquid chlorine tonners. There are six chlorination dosing batteries. Among these batteries, four batteries are having dosing capacity up to 30 Kg/hr with 4 tonners connected and two batteries having dosing capacity up to 60 Kg/hr with 8 tonners connected for chlorine gas dosing.

The complete chlorination system at Chlorine Plant M-IIIA is designed with safety at a premium, utilising the vacuum principle. This plant works on the gas withdrawl process. Withdrawl of chlorine gas is from the chlorine tonners. Chlorine gas passes through chlorine gas manifold at a pressure of about 2 to 4 kg/cm². The vacuum regulator converts the pressure into vacuum condition and chlorine gas flows under vacuum after this stage, hence chances of reliquification is eliminated. After vacuum regulator, the gas enters into the chlorinator. The chlorinator flow is adjusted with the help of rate valve, from the front cabinet. The gas flow meter provides a visual indication of the gas flow rate. The gas then passes to the differential pressure regulator. The differential pressure regulator is used to maintain a constant pressure differential across the valve despite in vacuum down-stream. This ensures a stable feed rate, irrespective of any variations in the motive water conditions. The required vacuum is created by utilizing an ejector system. These ejector system is provided to give chlorine dosing to various stages i.e. raw water, settled water, filter water and chlorine contact tank (CCT). For raw water and settle water ejectors, separate room is provided near settling tank plant. For CCT dosing, the ejector room is provided near chlorine contact tank and for filter water dosing, ejectors are provided at the outlet of filter plant. The ejector is the heart of vacuum type systems. The ejector has two important functions, to generate the required operating vacuum and to impart efficient mixing for generation of chlorine solution. The ejectors are designed to produce 25" to 28" of mercury (Hg) vacuum when no gas is being fed. The ejector vacuum is transmitted through the system components and opens the inlet valve in the back of the vacuum regulator where it is maintained at 20" of water column. Also ejectors are designed to mix gas with the ejector supply water generating a concentrated solution injected at the point of application. These equipments such as header line ball valve, pressure reducing valve (PRV), Remote vacuum regulator (RVR), Gas filter, chlorinators, differential pressure

regulator (DPR) , ejector assemblies etc. are incorporated with nut, bolts and washers. Due to corrosive and hazardous nature of chlorine gas, these nut, bolts and washers are observed corroded and rusted. Also due to periodic overhauling and maintenance of these equipments, the wear and tear is observed among nut-bolts. Nut and bolts are critical components in Chlorine Plant M-IIIA, Panjrapur. They play a vital role in ensuring the structural integrity and safety of assemblies. Thus this department must have the stock of SS nut bolt for the successful supply of chlorine gas. Also by adhering to the specifications outlined herewith, this department aim to ensure that all fasteners meet the required standards and contribute to the overall safety and reliability of the assemblies in which they are used.

In view of above this department proposed to carry out the work of "Fabricating, machining and providing SS 304 nut-bolts, washers, screw and U-clamps required for various equipments installed at Chlorine plant MIII-A Panjrapur".

SCOPE OF WORK

1. The scope of work involve “Fabricating, machining and providing SS 304 nut-bolts, washers, screws and U-clamps required for various equipments installed at Chlorine plant MIII-A Panjrapur.”
2. Nut- bolts, washers, screws and U-clamps shall be manufactured from SS304 material. The necessary test certificate from NABL lab shall be submitted along with supply.
3. The successful quotationer shall manufacture the given nut- bolts, washers, screws and U-clamps as per the specifications mentioned above.
4. The successful quotationer shall provide play free nuts with bolts wherever mentioned in the specifications.
5. The successful quotationer shall provide nut- bolts, washers, screws and U-clamps specifically as per the thread per inch (TPI) mentioned in the specifications.
6. The successful quotationer shall have to submit one sample of each nut bolt, washer, screw and U-clamp as sample for inspection to BMC engineer. Only after the clearance from BMC engineer further production shall be carried out.
7. The successful contractor shall provide each mentioned nut-bolt, washer, screw and U-clamp in a separate packaging at Chlorine Plant M-IIIA, Panjrapur and ensure easy identification. Each package should be labelled with material specification and quantity.

8. The successful contractor shall manufacture the given nut-bolt, washer, screw and U-clamp as per the standards such as ISO, ANSI, ASTM, BS.

GENERAL CONDITION

- i) The quotationer shall visit the site to ascertain the nature work acquainted with the work before quoting.
- ii) The quotationer shall carry out the work, as per schedule, after fixing a date in consultation with the concerned plant engineer.
- iii) Penalty will be imposed if work is not completed in the stipulated period as per penalty clause mentioned in the tender document.
- iv) The quotationer shall carry out the work with best workmanship with standard engineering practices.
- v) The quotationer has to make his own arrangements for loading, unloading, transportation and handling of their equipment / material. No man, material, vehicle, machinery, etc. will be provided by BMC for loading & unloading of material. The tenderer shall make his own proper arrangement for transportation of their staff.
- vi) If any discrepancy is observed in work executed during 12 months warranty period, the contractor shall have to rectify/ replace the same at his own cost.
- vii) The cost of any damages to BMC's property, injury or death caused during the execution of work or any claim arising out of it shall be the responsibility of the tenderer and the cost, if any, towards the same shall be recovered from the tenderer's bill.
- viii) The quotationer shall make their own arrangement for storage, security & safety of their materials and other belongings during the contract period at their own risks and costs at work place.
- ix) The work shall be carried out with good workmanship following standard engineering practice.
- x) Every effort is taken to define detailed bill of quantity and scope of work, however if any material / work which is not specified in scope work/technical specification and required for satisfactory completion of work shall be provided/ carried out by successful tenderer without any extra cost to the corporation.

SAFETY PRECAUTIONS

The contractor shall be responsible for the safety of all activities on the site. He shall comply with all applicable safety requirements and take care of safety of all persons entitled to be on the site and the works. He shall use reasonable efforts to keep the site and the works, both during construction and maintenance, clear of unnecessary obstruction so as to avoid danger to the persons and the users.
