TECHNICAL SPECIFICATIONS FOR BOILER WITH INBUILT HEATER

1. Boiler with inbuilt heater enclosed in a quartz boiler with a cup on top.
2. Quartz is a hard and shiny stone used in electronic equipment, generally in watches. Quartz heaters contain some of the most efficient types of heating elements available. They convert 100% of the electrical energy used into heat.
3. Quartz infrared rays heat the objects directly. They provide steady heat evenly and consistently from whatever location they are placed.
4. Quartz heaters can last for many years. Even the maintenance required for this type of heater is less.
5. Quartz infrared heaters are safe in commercial and residential settings because they do not burn oxygen like other heaters do. Quartz infrared heaters use electricity as their heating source. For this reason, they do not release toxic gases and are environmentally friendly.
